**CO2 emissions from road vehicles – Eco-innovations to reduce CO2 emissions from transport**

<p><b>Position for:</b></p> <p>Trainee</p>	<p><b><u>Short description of activity:</u></b></p> <p>The JRC is currently supporting major initiatives of the European Commission in the field of CO2 emissions reduction from light and heavy duty vehicles. Novel methodologies are being developed for accurately quantifying emissions of various on road vehicles using experimental measurements and computer simulation methods.</p> <p>The proposed trainee project consists in joining ongoing research programs on road transport generated CO2 emissions. In particular the trainee will assist the group in assessing the CO2 reduction potential of several eco-innovations (which are technologies with a CO2 reduction potential that cannot be identified by the current type-approval process). Part of the duties will involve the statistical analysis of usage factor data of the eco-innovations and the formulation and drafting of technical reports on the results achieved.</p> <p><b><u>Qualifications:</u></b></p> <p><u>Essential:</u> The candidate should hold a university degree (as stipulated in the Rules governing the Traineeship Scheme) in the fields of science or engineering. The candidate should have good knowledge of spoken and written English (level B2).</p> <p><u>Advantage:</u> Knowledge of one or more of the following will be an advantage: statistics and probability, automotive engineering, computer programming, data mining.</p> <p><b><u>For general eligibility requirements, please read the rules governing the traineeship scheme of the JRC:</u></b></p>
